foreandr@gmail.com | foreandr.github.io

I am a software engineer with degrees in both Mathematics and Computer Programming, which can be seen in more detail on my resume. My experience includes internal tooling, automation, analytics, and full-stack product work.

One of the strongest indicators of how I work is the software I have already shipped. I have built over one hundred public applications across different domains, many of which can be reviewed through my portfolio and GitHub presence. Those projects have generated real-world results, including approximately \$30,000 in revenue, and they reflect my ability to solve practical problems for users.

In professional settings, I have built automation that saved thousands of hours, created internal business software, worked across data-heavy systems, and delivered tools that reduced manual effort for teams. I enjoy difficult problem solving, and I take ownership of getting useful systems into production.

I would welcome the opportunity to contribute that same mindset to your team. Thank you for your consideration.

Sincerely,

Andre Foreman
