I am a software engineer completing a B.Sc in Mathematics at Trent University, with an Advanced Diploma in Computer Programming and Analysis from Fanshawe College. I have production experience building backend infrastructure, internal tooling, automation systems, and data pipelines.

Before working in software I represented Canada on the national volleyball team, competing internationally and earning multiple national championships. That period taught me how to perform under pressure, work within high-functioning teams, and maintain a standard of effort that most environments do not demand. I carry that into the way I approach technical work.

Having reviewed your requirements, I am confident I have the skills you are looking for. My experience spans Python and JavaScript across the full stack, relational and non-relational databases, REST API development, frontend frameworks, interactive dashboards, and internal tooling. I have built and deployed production systems end to end. A portfolio of work demonstrating these skills across a range of domains is available at foreandr.github.io.

I am motivated, I work hard, and I take quality seriously. I would be glad to contribute to your team and welcome the opportunity to speak further.

Sincerely,

Andre Foreman
